Introduction

The purpose of this report is to notify the public about ongoing efforts to suppress the treatment options offered by our organization. It will address the concerns and misinformation found online in regards to the founders and researchers of the Delta Institute, the BX Protocol™, staff, affiliates, members, and associates. Delta Institute is dedicated to providing accurate information for members and potential members alike. Delta Institute, working with Interpol and the US Federal Bureau of Investigation (FBI), has launched an investigation to combat acts of cyber terrorism committed by the media firm and the university funded students, for alleged harassment and crimes violating international standards for online activity. Delta Institute utilizes a variety of investigative tools needed to fight this range of cybercrime that pharmaceutical companies use as an ongoing tactic to fight against and suppress emerging health benefits within the integrative medicine sector. To find out more about suppression, please watch the following video:

Our treatment protocols are now supported by referring doctors in 18 countries. As the largest non-conventional program of our type, it is logical we are a target for medical suppression. Leiden University is funded by CEL (Centre of Education and Learning), a collaboration between the universities of Leiden, Delft, and Rotterdam. In 2015, Delta Institute became aware that several Ph.D. candidates from Leiden University in the Netherlands are performing dissertation research on suppression of dissent techniques. We identified that the BX Protocol™ has been the primary target for this research project.

In 2016, our organization hired a Russian-based security firm to investigate the source of significant cyber-attacks against our organization. We now have documented proof regarding a well-orchestrated effort funded by two large pharmaceutical companies and initiated by a New York Media firm, specializing in disinformation campaigns. This effort involves direct attacks against 16 large “non-conventional organizations” similar to ours. The conspiracy against our protocol includes a vast network of forums, websites (such as RationalWiki), blogs, and

physician and university groups, representing a formidable network of media resources designed to silence non-orthodox views and dissenting opinions that run contrary to the established views of conventional oncology.

Over the past year, the New York Media firm and Leiden University have supported cyber harassment with attacks against the BX Protocol™, its researchers, founders, staff, affiliates, members, and associates through the following means:

1. Deleting, modifying, misquoting, and fabricating information about the BX Protocol™, its founders, researchers, staff, affiliates, members, and associates.
2. Obstructing research with 3 separate universities.
3. Propagation of false rumors.
4. Posing as patients in forums, blogs, social media, or other internet venues.
5. Filing formal complaints with government agencies. Making frivolous complaints is one of their key tactics (McDermott et al., 2014).

The philosophical justification for this attack is that our protocol is “pseudo-science” and must be stopped for “the good of the public”. Yet, the organization has contacted three major universities performing studies on our methods and successfully impeded the studies in two of the three universities to suppress the very scientific data they claim we lack.

It is also important to understand that the BX Protocol™ is seen as a threat because:

- Delta Institute is developing and manufacturing highly scientific technologies outside of conventional medicine.
- Delta Institute is starting its own university to train doctors.
- Delta Institute currently has doctor affiliates in 18 countries, of which no less than 30% are MD's.
- Delta Institute is building a medical city in the Caribbean.
- Delta Institute's technologies and the BX Protocol™ are effective in treating chronic medical conditions because they target the root cause.
- Delta Institute will not pursue drug classification, peer review, or adhere to the double-blind standard.

Delta Institute is aware of the identity of this organization heading the disinformation campaign as well as the people involved. We have evidence and documentation that shows that this effort involves attacks against many people within the integrative health field. The attacks are both tactical and strategic in nature. Delta Institute can prove that the attacks were precipitated by two large pharmaceutical companies and we have identified at least one US Senator who appears to be the point of contact person for this disinformation campaign. We also know the hired media companies, universities, and individuals involved.

Delta Institute has confirmed that the attacks are specifically a suppression of dissent campaign that began against the anti-vaccination movement and has continued to spread from there. This is a well-funded campaign and as far as we can tell the BX Protocol™ is a primary target. We have learned that the Rational Wiki website along with many other Blogs, Forums etc., are all part of a worldwide organized network of media resources hired by the pharmaceutical industry to discredit the Integrative and or Alternative medical field. We continue to gather evidence and will share more as it becomes available.

It is important to understand that these individuals use any means necessary in their attempt to encourage us to cease operations. In 2016, one of our email systems was hacked and used to send death threats to Delta Institute board members. The cyber-terrorists demanded significant amounts of money be sent to members that died during, or after using the BX Protocol™. The indicated that failure to meet the deadline to send funds to these individuals would result in the penalty of death. While these statements turned out to be nothing more than idle threats, it is important to call out these behaviors to show just how sick these individuals are.

Delta Institute is committed to having open and honest discussions with any person who expresses interest in doing business with our organization. Open dialogue allows us to engage in discussions that allow all parties to utilize critical thinking skills. Critical thinking allows each individual the opportunity to seek out the necessary information required to make a decision based on facts, not rumors or disinformation. While we make efforts to provide external resources to support our position to help you on this quest, we encourage all interested parties to engage in independent research. Through this research, we are confident each person will identify the path to healing that is best for them.

This legal report will elaborate on responses to false claims found on RationalWiki, Transgallaxys Forum, Twitter, Haxabja YouTube Videos, and the WTAE Investigative Report.

- Claims that Delta Institute associated doctors have lost their license to practice medicine
- Claims that Delta Institute has a “secret scam clinic” in the United States
- Claims that Dr. Smith has a fake doctorate originating from a degree mill
- Claims that Delta Institute is involved in money laundering
- Claims that Dr. Smith is a felon and was arrested and that his mugshots are available on the internet
- Claims that cancer patients have died while on the BX Protocol™ due to choosing our program over chemotherapy
- Claims that before you begin treatment, you must sign an extensive release form with multiple warnings including the phrase, “not intended for the use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease”
- Claims that Delta Institute uses cheap products made in China and then resells them at 10 times the price
- Claims that technologies developed by Delta Labs emit the same K_a band radio frequency as a police radar speed gun
- Claims that Delta Institute employees are not licensed physicians
- Claims that our testimonials advertise that the BX Protocol™ is a cure for everything
- Claims that the BX Protocol™ is not valid because it is not published in a peer review journal
- Claims that Delta Institute does not offer evidence or research for any of their claims
- Claims that the BX Protocol™ treatment costs \$16,995, paid up front, no refunds
- Claims that mitochondrial disease is a real affliction and may cause a wide variety of symptoms and that we cannot claim that it's the root cause of most disease when it is unproven

- Claims that Delta Institute’s treatment is an “energized nontoxic biomolecule created from pure crystalline fructose”
- Claims that the BX Energy Catalyst is homeopathic or related to ozone therapy, neither which has any relation to the explanation regarding the energized nontoxic biomolecule
- Claims that Royal Rife was a discredited scientist who coined the term Bacillus-X and that he was nothing more than a conspiracy-theorist
- Claims that Dr. Smith is a book salesman, not a scientist
- Claims that Dr. Smith became a scientist after his singing career failed

It is also important to understand medical politics. There are numerous resources available that investigate the suppression of successful medical treatments. We highly encourage you to research this topic. Evidence exists that shows how the American Medical Association kept records of every practitioner and clinic that did not practice drug-based medicine. They worked with various governmental agencies to suppress or distort information on therapeutic approaches that competed with conventional medicine’s drugs and procedures (Lisa, 1994). Researching the history of medical suppression and understanding how it is used today can help you better understand why Delta Institute has been targeted.

We hope this legal report is an effective tool for any person interested in finding out the facts about the BX Protocol™. Delta Institute International is committed to providing information to members and prospective members alike. Campaigns of misinformation have been prominent against the BX Protocol™ but are not based on facts. Additionally, much of the information misrepresented was illegally obtained. If you have any concerns or questions in regards to the Delta Institute, the BX Protocol™, or its founders, we encourage you to engage in open dialogue with us so we may address them. We also invite you to visit our forum to see responses from our legal team and what other members are saying about us.

 Hong-Kong

The BX Protocol Forum

The BX Protocol Forum was designed to provide a central location where individuals could easily access rebuttals to frequently made claims. Much of the information found in this report can be found in the forum. When concerns about legitimacy arise, the forum allows Delta Institute to provide fact-based responses from our legal team, Case Managers, and other staff members. Additionally, it is a place where members and their families can share their experiences with the protocol. The BX Protocol Forum home page can be accessed by clicking on the following link:

<http://www.bxprotocolforum.com/>

In recent months, Delta Institute has been criticized for asking those who would like to contribute to the forum to register. Additional criticism was levied against us when we closed new registrations in November 2016. Some would like you to believe that we require registrations and closed new registrations because we want to censor posts that do not portray our company in a positive light. This is simply not the case. When the forum was first launched, we allowed contributors to register and post their thoughts, opinions, and experiences. As time went on, we were forced to stop allowing new registrations because it was continually targeted by hackers. To secure the site, limitations to registrations had to be made. This is not ideal as it reduces the effectiveness of the forum. It also decreases our ability to promote the intended purpose of our site when new members are not allowed to share their thoughts, experiences, and opinions. We will continue to explore alternatives that will allow new forum members to register in a manner that is secure.

RationalWiki

When conducting an internet search for the BX Protocol™, it is likely you will see a link about us on the RationalWiki website. Wiki pages can often help individuals find legitimate resources when seeking information on a wide variety of topics. Generally speaking, Wiki pages can be a good place to start research, but cannot be relied upon as a primary source. It is also important to understand that not all Wiki pages are created equally. Many Wiki pages are designed to be neutral in nature in an effort to increase legitimacy. They provide fact-based information so individuals can conduct further research and decide for themselves. Other Wiki pages, such as RationalWiki, are more biased in nature. According to their website (www.rationalwiki.org), the purpose of RationalWiki includes:

- Analyzing and refuting pseudoscience and the anti-science movement
- Documenting the full range of crank ideas
- Explorations of authoritarianism and fundamentalism
- Analysis of criticism of how these subjects are handled in the media

We do not take issue with the purpose of RationalWiki. We strongly believe that each organization is entitled to fulfill their intended purpose in the way they see fit. In fact, their snarky point of view format can be very entertaining and some ideas presented meet their criteria. However, it is important for individuals to understand how the organization operates, who contributes to it, and how their agenda is executed. It is also important to understand that RationalWiki should not be considered as a primary source for research.

According to their website, RationalWiki is not a neutral point of view like Wikipedia. A neutral point of view is when the contributor provides a fact-based representation on the topic they are researching to provide an overview of the big picture. The writer often includes references to support their assessment. RationalWiki states that they do not censor, hide, or ignore things, but that they are uncompromising on what is right and what is wrong, and why that is so. This means that a contributor can make an assessment of a particular topic and present their opinion without researching opposing viewpoints. Additionally, their page states that while “references are desired” writers are encouraged to draw their own conclusions. These conclusions do not have to be based on facts. For this reason, RationalWiki is not recommended for use when looking for unbiased research.

When the article on the BX Protocol™ initially surfaced, Delta Institute wished to engage in open dialogue to correct false statements and misinformation. It was our desire to explain the science behind our protocol. Unfortunately, there was no interest in conversation or correcting these misrepresentations. Our only option was to post our responses on the “Talk” page, which we had no problem doing. Per their website, if the information proves the statements are false, the main article will be edited appropriately. Of course, this did not happen. Even when verification was provided showing some statements were completely false, no effort to correct or remove these statements were made. This is not highly surprising. It is a Wiki page that is not administrated by anyone other than a few volunteer moderators. Additionally, other bloggers have pointed out that because the page is presenting a biased point of view, they misrepresent and omit content that goes against their case (Quora, 2016). This has been our experience as well and seems to completely contradict their statement that they do not censor, hide or ignore things and that their desire is to show “why” it is so.

Many claims that were made on RationalWiki can be found in the section titled, “*General Legal Response to Claims*”. Keep in mind, some claims are not deserving of a response and no time will be wasted on them. As you conduct research, you may determine you have questions that have not been answered or that you would like more information. We highly encourage you to contact us for further information. We also encourage you to conduct independent research regarding claims made.

Transgallaxys Forum

Another site that may populate when conducting an internet search is Transgallaxys Forum. An Internet forum is a website where people can have discussions in the form of posted messages. Like most forums, it is simply a place to share your opinion, which does not have to be based on facts. We do not oppose the use of forums. If we did, we would not have a forum of our own. They can be a great place for individuals to share information and experiences when the moderators encourage open discussion based on facts.

Efforts have been made to address claims made on Transgallaxys Forum in the section titled, “*General Legal Response to Claims*”. Some claims are not deserving of a response and no time will be wasted on such claims. As you conduct research, you may determine you have questions that have not been answered or that you would like more information. We highly encourage you to contact us for further information. We also encourage you to conduct independent research regarding claims made.

Twitter

Twitter has been an excellent tool for us to share information about the BX Protocol™ with those who are interested in finding out more about our organization. Once individuals express interest, it is not uncommon for them to be contacted by R0b1999. Many of our current members and other supporters have been contacted by this individual. Much of the information presented on his page is very similar to claims made on RationalWiki, Transgallaxy Forum, and other outlets. Some proprietary information that was used in his tweets was stolen directly from our internal affiliate website. When a security breach was recognized, we were forced to shut down our member Back Office for a short period of time to ensure the sensitive medical information of our members was safe. Enhancements have been made to help cease future potential breaches on all sites we operate. We know that the Twitter user R0b1999 has used large volumes of stolen information in his tweets. It is also important to call out that much of the information this individual tweets is highly biased and misrepresents our protocol. Some tweets are purely false.

Twitter is another forum where individuals are allowed to share their opinion with others. Tweets are not fact-checked and the information is often biased. Again, efforts have been made to address claims made on Twitter in the section titled, “*General Legal Response to Claims*”. Like other sites, some claims are not deserving of a response and no time will be wasted on such claims. As you conduct research, you may determine you have questions that have not been answered or that you would like more information. We highly encourage you to contact us for further information. We also encourage you to conduct independent research regarding claims made.

Haxabja YouTube Videos

YouTube is another great tool we utilize to share videos with information about the BX Protocol™. If you are reading this report, it is likely you have watched our videos on YouTube. You may have even subscribed to our channel. When conducting research about our program, it is likely you may find videos from a user named Haxabja on YouTube. There are several videos in a playlist called “*BX-Protocol*” *Cure All Scam*. You may notice that this user points back to RationalWiki as a source for more information on the BX Protocol™. For more information on RationalWiki, please refer to page 6 of this document. YouTube is another forum where individuals are allowed to share their opinion with others. Videos are not fact-checked and the information is often biased. Claims made in videos from Haxabja can be found in the section titled, “*General Legal Response to Claims*”. Again, some claims are not deserving of a response and will not be addressed, but we encourage you to reach out to us if you have questions or concerns that have not been addressed.

You may notice that the user points out that the CEO of Delta Institute is requesting the playlist be removed. It is important to understand that this request was not made because we wished to suppress the videos. While the videos spread misinformation, the primary reason for requesting removal was due to the fact that the videos contained stolen information from proprietary sites. They also included the use of our trademarked information without our permission. It is not unusual for companies to make requests to protect their trademark. More

importantly, it is natural that a company would request videos containing stolen information and media be removed.

One of the videos in the playlist is a video from the FDA providing information on how to spot health fraud scams. This video highlights that a health fraud scam is a way to deceive people into buying health care products that offer a quick fix. It is important to understand that the BX Protocol™ is not a quick fix. Our program is not promising that a member will be cured simply by taking a supplement. For best results, members should follow diet and cleansing recommendations, administer the BX Energy Catalyst™, communicate regularly with their case manager, and complete daily reporting, amongst many other things. The healing process takes time and commitment and we do not advertise that this program is a quick fix for your condition. While our program has been found to treat a variety of illnesses and chronic conditions, we do not make guarantees that it is a cure. Results may vary depending on the individual's unique case.

The video also mentions that health fraud scams usually have a lot of testimonials, often with paid actors. Delta Institute is often accused of being a “cure all” scam because of the number of those testimonials we have on our website and YouTube channel. Please note, people who provide testimonials for Delta Institute and the BX Protocol™ are **REAL** members. These members have provided testimonials according to their own free will. Members are **NEVER** compensated for their testimonial. More information about testimonials can be found in the section titled, “*General Legal Response to Claims*” on page 17 of this document.

WTAE Investigative Reports

In 2016, we were contacted by an ABC news affiliate, Paul Van Osdol, with WTAE Pittsburg. Dr. Smith communicated with Mr. Van Osdol and agreed to contribute to the story he was working on regarding the BX Protocol™. We cooperated with the reporter by providing contact information for university researchers and facilitating communication with members. We had every reason to believe he was a fair reporter and that all sides of the story would be shared with the public he serves. Unfortunately, we were shown that he had little interest in presenting a fair and balanced review.

After the story aired, we received digital assets that affirmed for nearly six months, Paul Van Osdol had been in contact with the Netherlands group responsible for many of the disinformation campaigns launched against us. We further discovered that Mr. Van Osdol, who is also Dutch, is a long-time cohort of the disinformation team, outside of the capacity with ABC News. Much of the information used in this news report was obtained illegally through the hacking of Delta's proprietary online systems. Other records confirm that Mr. Van Osdol also subscribes to the same ideology of the group of hackers responsible for the disinformation campaign against us.

Detailed responses to many of the claims in the WTAE Investigative report can be found in this report under the section titled, “*General Legal Response to Claims.*” However, it is important to highlight the following:

1. The main story highlights a member named Terry, who allegedly died while doing our program. Mr. Van Osdol failed to present the full story, including the following facts:
 - No funds were collected from Terry. She was a case study and her program costs were funded through Delta's foundation.
 - Terry was a cancer researcher with a background in science.
 - Terry was never able to start the BX Protocol™ as her primary form of treatment.
 - Terry advised us that she chose chemotherapy to appease her family. In one correspondence she wrote, "I fear chemotherapy is killing me." She died two weeks later.
2. The investigative report claims that shortly after Ron completed his video testimonial for the BX Protocol™, he died. The following facts were omitted and/or misrepresented:
 - Ron began the BX Protocol™ on hospice with only two weeks to live.
 - The video cited was a video of Ron, just 30 days after he started treatment.
 - Ron went on to be discharged from hospice.
 - Ron's oncologist encouraged him to continue the BX Protocol™ based on the results he was receiving.
 - Ron resumed a normal lifestyle. He ran half marathons, went skydiving, vacationed in Costa Rica, and more.
 - Ron did a follow-up video one year after the cited video. Mr. Van Osdol was provided this video but chose not to use it. He also chose to claim that Ron died directly after doing the initial video, which is false.
3. Dr. Valerie Donaldson was kind enough to initiate contact with the reporter to offer valuable insight into the effectiveness of the BX Protocol™. The following facts were omitted and/or misrepresented by Mr. Van Osdol:
 - In past interviews, Dr. Donaldson had expressed that 100% of her patients got better. She did not indicate that they were cured. In a private interview with Mr. Van Osdol, Dr. Donaldson clarified that she could not think of a single patient that the BX Protocol™ did not benefit in some way. This information was not presented to viewers.
 - Mr. Van Osdol agreed to do an off-camera interview at her office. After the interview, he surrounded her in a private parking lot just to obtain the "footage effect" seen in the report to promote the idea that she was unwilling to do the interview, which was false.
4. During an interview with a member who had success with our program, she was told that her outcome was nothing more than a placebo.
5. While Mr. Van Osdol was in possession of multiple success stories from members, he failed to present the details and implied it was only helpful for members with Lyme Disease.
6. Mr. Van Osdol interviewed the deputy director of the University of Pittsburgh Cancer Institute who claimed that BX Protocol™ is not valid because it is not peer reviewed. Mr. Van Osdol did not present the whole story. Please note the following:

- Delta Institute contracted and paid the university directly to conduct the study. Delta Institute was invoiced by the university, and the university was paid directly. No payments were ever sent to the researcher (see Exhibit B and Exhibit C on this page).
 - The university researcher notified Delta Institute that Dutch and German university groups “intervened” to stop future studies at Utah State University.
 - Mr. Van Osdol was offered access to over 150 pages of research conducted over a 2-year period at Utah State University. He quoted the head of the department of Utah State University as saying, “*We do not endorse the BX Protocol.*” Yet, he refused to interview the researcher involved. The researcher is a 25-year veteran in cancer researcher who had nothing but good things to say about the research conducted. More information on that study can be found on page 20.
7. Mr. Van Osdol claimed that Dr. Smith’s credentials were not valid in the United States. This is completely untrue. Please see page 13 for additional information.
 8. Mr. Van Osdol made claims that Delta Institute’s CEO was involved in a scam. He used a court case to support this claim and identified the CEO as a “defendant” when he was actually the “plaintiff” in the matter. The goal was to try to discredit the leadership within the company, so the case was misrepresented.

Exhibit B

Subject: RE: Invoice for Payment

Christian,

The check was received on 2/18/16

Shanell

Treasury Services Manager
(435) 797-1682

As previously mentioned, additional information regarding claims made in the WTAE Investigative Report can be found in the section titled, “*General Legal Response to Claims*”. Like claims made from other sources, some statements are not deserving of a response and no time will be wasted on such claims. As you conduct research, you may determine you have questions that have not been answered or that you would like more information. We highly encourage you to contact us for further information. We also encourage you to conduct independent research regarding claims made.

General Legal Response to Claims

Shortened versions of the responses below can be found on our website by accessing the legal page at http://bxprotocol.com/legal_response.php. Additional claims from sources such as RationalWiki, Transgallaxys Forum, Twitter, Haxabja YouTube Videos, and the WTAE Investigative Report are also addressed. Misinformation campaigns are prominent against the BX Protocol™ and it is our desire to provide fact-based responses to each claim against our company. Accusations have been made that we refuse to engage in conversation with those who criticize our program and that we seek to suppress anyone who makes claims against us. This is simply not the case. While we do seek to address illegal activities against us, we encourage open discussions with those who have questions. This report will provide comprehensive information and guidance on common claims to assist interested parties in their evaluation of our company.

Response to claim that Delta Institute associated doctors have lost their license to practice medicine:

Medical professionals and other eligible persons that are interested in sharing the BX Protocol™ with their patients or clients go through a general screening process. Interested parties must meet approval criteria in order to gain access to our proprietary resources. Every attempt is made to ensure the individuals promoting our protocol meet all eligibility criteria. If we become aware that doctors who are associated with us no longer meet these requirements, appropriate action is taken to rectify the situation.

Various doctors have become the target of slanderous activity because of their association with us. Doctors like Michael Lee Gerber are often some of the most well-respected doctors in the integrative health field. In recent months, nearly all professionals who are affiliated with us have experienced some sort of slanderous attack to varying degrees. Some high-profile affiliates have asked to sever their relationship with us. The majority have indicated it was not because they doubted the legitimacy of our company or program, but that it was simply due to the relentless attacks they’ve endured for being associated with us.

Approximately 1600 fabrications, character assassinations, harassment, and a variety of defamation and personal attacks directed toward almost anyone mentioning the BX Protocol™ in a positive light, have been distributed. We do not feel the need to innumerate the details, but it is important to mention. The attacks have been directed mostly toward integrative practitioners in about 12 of the 18 countries that Delta has affiliates in. Their attacks are based on distortion and falsehoods and have had the general effect of increasing support for those being attacked.

It is important to complete further research rather than take these attacks at face value. It is also vital to know that sources such as Quack-watch, are well-known paid disinformation services for pharmaceutical companies. It is significant to highlight that we are aware that there have been times when a medical license may be removed simply due to practicing methods that are not approved by the pharmaceutical industry. In these cases, it shows that revoking the license has very little to do with their competency and more to do with their failure to create an alliance with the pharmaceutical industry.

Response to claim that Delta Institute has a “secret scam clinic” in the United States:

Delta Institute International Health Restoration & Research Club offers two programs to their private club members. These programs include the Delta Home Program and a hybrid option which incorporates both the Delta Home Program and a stay at the Delta Member Retreat. We believe our innovative approach to health restoration is the key to establishing complete health. Each program is innovative and provides excellent combinations for a positive remedial outcome for the member. This model allows us to serve members from all over the world.

It is not a secret that we did have a research center in the United States at one time. That center was relocated in 2013 to better serve our members from all over the world. The medical director of that research center was licensed in the United States. While some would like the public to believe this research center is still being operated in the United States, this is simply not the case. Any staff vacancies found in the local classifieds pertain to a Human Resources service company and have no direct relationship to the medical end of Delta Institute International. Delta’s Member Retreat is now located in the Caribbean and more information is available to registered members upon request. For security reasons, we do not provide detailed information on location to the general public. However, you may view more information on Delta’s Member Retreat by watching the following video:

Response to claim that Dr. Smith has a fake doctorate originating from a degree mill:

Dr. Smith is a highly-educated individual with a passion for understanding the root cause of chronic conditions. He received his B.A. degree in science from the University of North Dakota School of Medicine. Dr. Smith received his Ph.D. from Canterbury University after completing a rigorous course requiring 92 credits and a 4-year degree. Jen from Canterbury University says of Dr. Smith, "*We consider Dr. Smith among our most respected alumnus.*" Canterbury University is a legitimate private school. From their website:

"Canterbury University is an internationally administered tertiary level academic institution with incorporated and unincorporated structures in multiple jurisdictions and its overall structure ensures that it is legally entitled to conduct itself as a private degree granting institution."

Because the university lacks accreditation, they have often been labeled a "degree mill". It is important to understand that accreditation is voluntary and does not guarantee the quality of an institution or the degree they grant. It is equally important to understand that lack of accreditation does not mean that the education provided is not sufficient. In fact, it would not be possible for Canterbury University to obtain accreditation in the United States and many other countries because it is a foreign school.

It is true that the legality of degrees received from Canterbury University were called into question by a court in the United States. The outcome was a victory for all foreign schools serving students from all over the world. It was also a victory for the students who obtained their degrees from a school that was not based in the United States. In just 27 short minutes, it was ruled that degrees from Canterbury University are legal in the United States (Buckhalter, 2009). This ruling helped highlight that it is more important to evaluate the degree program itself, not the accreditation of the University. In fact, there is evidence that Canterbury graduates possess preferred skills over traditional University Graduates. In a study comparing solutions from traditional University Graduates to Canterbury University graduates, 98% of the employers preferred the solution presented by the Canterbury University graduate (Forex News, n.d.). This shows that attending a U.S. accredited university does not necessarily mean that the student will possess the education and skills to be successful in their field of study.

Response to claim that Delta Institute is involved in money laundering:

Delta Institute is not involved in money laundering. Money laundering is the concealment of illegally obtained money, typically by means of transfers involving foreign banks or legitimate businesses. Because members make payments via wire transfer, allegations of money laundering have surfaced. Delta Institute is an international company, serving members and affiliates from all over the world. Any member or company associated with the BX Protocol™ (like those companies listed by the Leiden team on their disinformation site) have fully audited financials and are legally compliant within their respective jurisdiction.

Response to claim that Dr. Smith is a felon and that his mugshots are available on the internet:

These claims are misleading and have no merit. Dr. Smith was ticketed in 2002 for protesting a beef and poultry contamination incident. The protest was aimed at a food chain and the USDA. When refusing to leave the property, he was written a ticket and released. This type of misdemeanor required a mugshot under a plea in abeyance. Dr. Smith has NO arrest and NO conviction. While Dr. Smith respects the laws in his state and country, he offers no apologies and is proud of his actions in this instance. He will always exercise his constitutional right to protest peacefully against unjust activities that harm others.

WANTED

"Dr" Dewayne Smith, who currently resides in Utah, born circa 1968, six feet tall , over 200lbs.

2014

2002

2014

Exhibit A

In 2013, Dr. Smith was ticketed for target practicing on a gun range that had been the active gun range in the area for nearly 20 years. Dr. Smith was unaware that the property was under new ownership. The new owner of the property requested that police start ticketing people if they came on the land. That is the owner's right and Dr. Smith was more than happy to pay the fine. This was a misdemeanor trespassing charge and again under a plea in abeyance, mugshots were required. Again, there was NO arrest and NO conviction.

Dr. Smith takes full accountability for his choices. The website used to locate the "mugshot" of Dr. Smith allows the person to request that their record be removed. Dr. Smith has made no effort to hide the tickets and has not requested the photo be unpublished. He has no problem offering an explanation to anyone who shows concern for his perceived criminal background. It is clear that he is not a felon, nor is he "wanted" by any governmental agency. Pictures, such as Exhibit A (above), have been created to mislead those who are interested in the BX Protocol™. It is our desire to provide factual information to dispel these fabrications. Please do not be fooled by childish pictures and fictional stories.

Response to claim that cancer patients have died while on the BX Protocol™ due to choosing our program over chemotherapy:

Statements such as the one above are taken out of context and are made to cause fear and confusion. No allopathic or alternative protocol has a 100% success rate. Delta Institute does not claim that a member will be cured. The disclosures on the website and in the membership agreement, along with the affidavit show evidence of this. Prospective members must have a consultation with one of our doctors to determine eligibility. Even though a prospective member meets eligibility requirements, it does not mean we can guarantee a successful outcome. If a potential member is approved, they are encouraged to conduct independent research on their options in an attempt to determine which treatment plan is best for them. This is a very personal decision for each member and we respect whatever path they take.

It is also important to understand that chemotherapy is not a cure for cancer. Choosing chemotherapy does not guarantee survival (Harrington & Smith, 2008). Chemotherapy is not a cure for cancer and is not always the best option for an individual diagnosed with cancer. A McGill Cancer Center survey which was cited in the book "Reclaiming Our Health", written by John Robbins (1996), calls out:

"75% of Americans diagnosed with cancer are said to receive chemotherapy treatment, which is of course suggested (and prescribed) by their oncologist. But, 75% of oncologists also said that if they had cancer, they themselves would NOT use chemotherapy treatment."

Leading the public to believe that chemotherapy will cure cancer is a disservice. When 75% of the prescribing physicians would not partake of the same treatment they are recommending, the patient should conduct further research on their options. There are alternative medical treatments that offer similar success rates, if not better. Each individual has the right to select the treatment plan that feels right for them, even if it isn't in agreement with the pharmaceutical companies or their physicians.

There are a handful of obituaries presented as documented cases where members passed away. Considering that 30% of Delta's enrollments for cancer support are in hospice care, these death cases cited are extremely low. They are presented as people who chose the BX Protocol™ over chemotherapy or other treatment. The picture painted of their cases does not depict the full story. Many of these members with end-stage cancers reported that they experienced improved quality of life while on the protocol. Conventional oncology experiences a 100% failure rate given a similar population, with no quality of life improvement. Deborah Childs (2011) in her book "A Dose of Reality: Losing William to the Big Business of Cancer in America" said,

"I would eventually realize from William's [stage 4 colon cancer patient] situation that standardized care providers who are given the power to protect the health of Americans are doing exactly what they are accusing the alternative therapists of doing - failing to save patients, while making huge profits from treatments that far too often do not work."

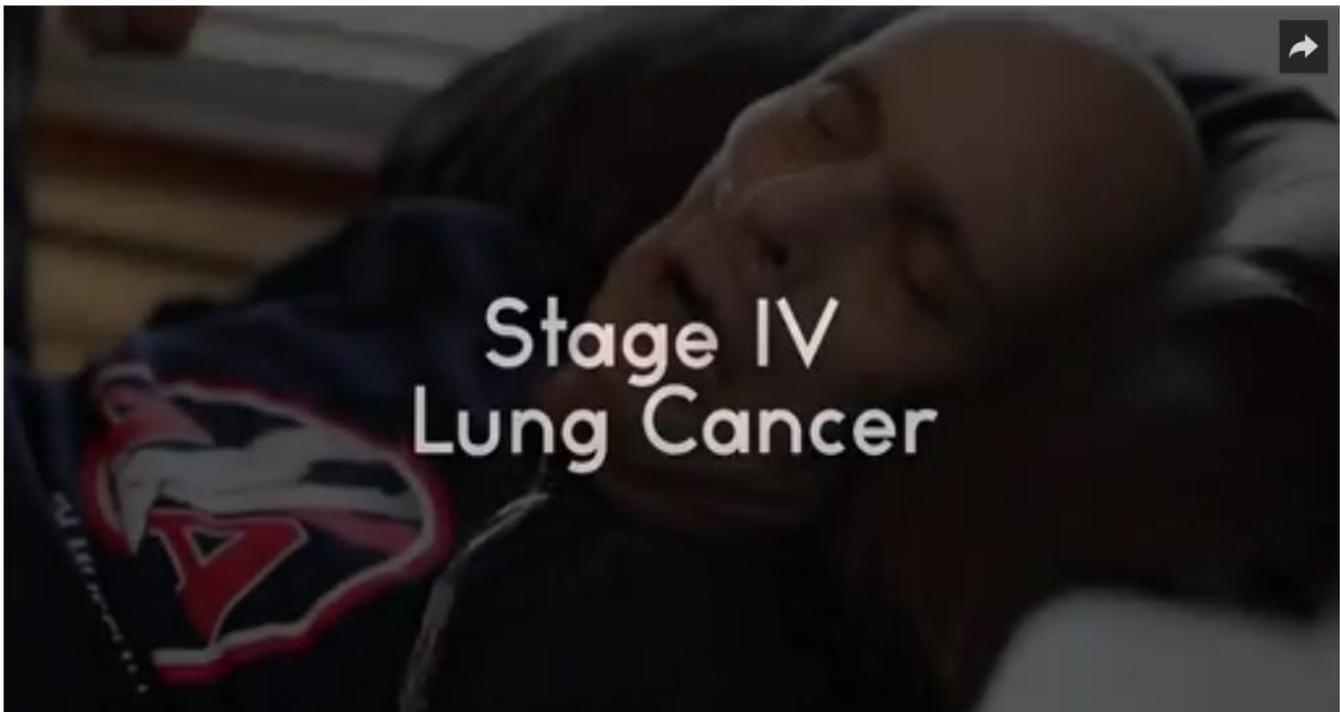

The reality is, even oncologists in the conventional medical profession cannot guarantee that the treatment plan they are recommending will cure their patient. It is hypocritical to condemn an alternative medical treatment when conventional oncology also experiences loss of life regularly. We understand that there are immoral people in this world who promise a cure at a costly price and fail to deliver, but they exist in both the conventional and alternative medical fields. If ANY medical provider promises a cure, it is important to conduct independent research to evaluate the claim being made.

It is also critical to understand that much of the information presented regarding the members who passed away is incomplete or completely inaccurate. It is presented to mislead, cause confusion, and instill fear. It is important to understand the following:

- Multiple individuals presented as cases to represent that a "member died from the BX Energy Catalyst™" chose to use chemotherapy in conjunction with the protocol. The claim that they chose the BX Protocol™ over chemotherapy and it killed them is completely false.

- It is presented that Delta preyed on these individuals by taking their money and selling them false hope while they were suffering from end-stage cancers. Clear expectations are always set with potential members and no guarantees are given. Additionally, many of the individuals presented did not contribute their personal funds to the program. Several of the cases cited were free trials or case studies. In the unfortunate event a member pays for membership and passes away, the membership is fully transferrable.
- More than one individual presented experienced improved quality of life **AND** extended their life. One member presented was on hospice and was told by his physician that he could die any day. When he began the program, his only expectation was to extend his life by 30 days at most. This particular member extended his life by over two years and was more than pleased with his results.

Health professionals recognize that there are significant challenges regarding health restoration in end-of-life cases. In the following end-of-life testimonial, the member documented did not recover. However, the video shows his quality of life was drastically improved during the last month of his life and his family was grateful to have extra time to spend with him. We highly recommend you watch the following video to better understand the challenges in end-of-life cases:

Response to claim that before you begin treatment, you must sign an extensive release form with multiple warnings including the phrase, “not intended for the use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease.”

Regulatory statements like these are often required in order to meet the legal requirements of specific countries. This specific statement helps us comply with various governmental regulations. The intent of the release form is to provide the member with adequate information

to determine if the benefits outweigh the risks. This empowers the member to decide for themselves whether or not they would like to participate in the program. We encourage potential members to ask questions and read the agreement in its entirety. The Delta Institute understands the importance of making the right decision when it comes to your health and encourages potential members, together with their physicians, to make an informed decision.

Some may find it interesting that Delta Institute International would place any emphasis on FDA compliance as a non-U.S. international business organization with its offices, servers, doctors, and manufacturing facilities outside of the geographical boundaries of the United States of America. However, it's critical that citizens of the United States, and other western democracies, understand that the FDA is an International Food and Drug Agency, not just a U.S. jurisdictional authority. The FDA has operational posts in many of the 22 countries associated with Delta Institute International Limited. It is, therefore, critical that members understand the complexities related to the FDA's Global Task Force, and the necessity to synchronize Delta's global model with the FDA's worldwide standardization of health regulation.

The first priority for Delta is for the potential member to understand what Delta's products and services are, and what they are not. This is a very complex issue as it pertains to definitions regarding drugs, medical advice, dietary supplements, food, medical devices, and the overall intended use of a product or technology with respect to particular jurisdictions. Each of these must be understood in order for the potential member to gain insight with respect to Delta's efforts to maintain compliance within each particular jurisdiction.

Drug Definition

SEC. 201. [21 U.S.C. 321] (g)(1): The term "drug" means (A) articles recognized in the official United States Pharmacopoeia, official Homoeopathic Pharmacopoeia of the United States, or official National Formulary, or any supplement to any of them; and (B) articles intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease in man or other animals; and (C) articles (other than food) intended to affect the structure or any function of the body of man or other animals; and (D) articles intended for use as a component of any article specified in clause (A), (B), or (C). A food or dietary supplement for which a claim, subject to sections 403(r)(1)(B) and 403(r)(3) or sections 403(r)(1)(B) and 403(r)(5)(D), is made in accordance with the requirements of section 403(r) is not a drug solely because the label or the labeling contains such a claim. A food, dietary ingredient or dietary supplement for which a truthful and not misleading statement is made in accordance with section 403(r)(6) is not a drug under clause (C) solely because the label or the labeling contains such a statement.

This definition underscores the difficulty in avoiding drug regulation. The first part of the definition simplifies compliance to a large extent, which reads: "intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease". That is easily achievable by way of the various disclaimers, affidavits, disclosures, and education that Delta Institute attempts to provide its members. However, the second statement contains some very broad language as part of the definition of a drug:

"(C) articles (other than food) intended to affect the structure or any function of the body of man or other animals;"

The FDA clearly states that the regulation of supplements, for instance, fall under a different set of regulations than those covering conventional foods. With this in mind, we are expected to define “unapproved drugs” as any supplement which is intended to affect any structure or function within the human body. Under this definition, the following dietary supplements are currently being marketed as “unapproved drugs”:

Product	Function
G® Series Pro	Marketed for Hydration and Energy Production
Schiff® Digestive Advantage	Marketed for Constipation and Immune Health

It seems ludicrous, and certainly the FDA does not have a current campaign against these products. However, the two examples above illustrate the broad powers claimed by the FDA and the need for clear and accurate disclosures to the consumer regarding the intended use of Delta Institute’s dietary supplement products.

Response to claim that Delta Institute uses cheap products made in China and then resells them at 10 times the price:

Energenetix does purchase enclosure units from China in the interest of saving money for its clients. However, all of the circuitry and research that goes into the “empty box” has originated from research conducted by seasoned engineers and researchers employed by Energenetix or related companies. The quality of these products is not compromised by using enclosure units that will reduce overall costs for clients. The technologies are only available to certified affiliates or Delta members.

The average cost of Energenetix equipment ranges between \$4,000-\$12,000. X-Ray radiation therapy machines average around \$3 million each. These machines are far more expensive and have been shown to do more harm than good. A study conducted at the UCLA Jonsson Comprehensive Cancer Center (Printz, 2012) describes how radiation treatments actually promote malignancy in cancer cells instead of eradication. We encourage individuals to conduct independent research on radiation therapy to determine which treatment option is best for them. It is important for people to understand that radiation can actually lead to a treatment-induced death, whereas many alternative medical treatments do not (Sarich, 2013). Each person has the right to choose alternative treatment options even if they do not coincide with mainstream medical views. Members and certified affiliates who choose to purchase technologies produced by Energenetix can be assured that quality is not compromised by purchasing enclosure units from China.

Response to claim that technologies developed by Delta Labs emit the same K_a band radio-frequency as a police radar speed gun:

Delta Technologies include more than K_a bands. K_a band is simply a frequency range that covers the frequencies of 26.5–40 GHz. Depending on the amplitude and the use of the pulse cycle. If you are interested in the effect of the K_a band on Bacterial Mutagenesis, we

recommend conducting independent research. Research literature that explores the use of the ranges below to treat bacterial inactivation, gene transcription manipulation, etc.

Some of our research is based on the use of X, K_U, K, and K_a radio frequency bands. We have developed 8 medical technologies in total covering the following ranges:

- High Frequency (HF) 3-30 MHz
- Very High Frequency (VHF) 30-300 MHz
- Ultra-High Frequency (UHF) 300-3000 MHz
- Ultra Sound: 580 kHz
- Multi-Wave Oscillation (700 hz-300 MHz)

It is recommended that independent research be conducted to explore the use of the ranges listed above to treat bacterial inactivation, gene transcription manipulation, etc. Conducting a web search with the phrase “bacterial inactivation by radio frequency”, “effect of radiofrequency electromagnetic fields on cells”, “Cellular and Molecular Responses to Radio-Frequency”, “K_a band on Bacterial Mutagenesis”, etc. will result in a number of scientific articles to assist you in your research.

Response to claims that Delta Institute employees are not licensed physicians:

The Delta Institute provides membership to individuals from all over the world. Licensing requirements vary from country to country. It would be unreasonable to expect staff members to be licensed in all the locations they serve. When choosing a provider to help you restore your health, we highly recommend you consider their experience and level of expertise along with their credentials. All of Delta’s employees are licensed commensurate to the requirements of their respective jurisdictions.

Response to claims that our testimonials advertise that the BX Protocol™ is a cure for everything:

Members are not paid for their testimonials and they are not actors. The testimonials provided document actual member experiences. Many testimonials document the experience of users over the course of 12 months or more. They explain the challenges and successes of the health restoration process. This allows viewers to draw their own conclusion of whether or not the BX Protocol™ is effective and if they would like to explore whether or not the BX Protocol™ is an appropriate treatment option in their case. Testimonials should not be the only reason a person purchases our membership program. Because no two members are the same, we require that potential members have a consultation with one of our doctors to determine if they meet eligibility requirements. This allows us to determine if the program is a good fit for the potential member. If approved for membership, we also encourage you to conduct independent research to determine if the program is right for you or your loved one.

Response to claims that the BX Protocol™ is not valid because it is not published in a peer review journal:

There is a common misconception that if a treatment option has not had studies published in a peer review journal, then it is invalid and should not be considered an appropriate method of treatment. It is important to understand that this is not always true. In recent years, the peer

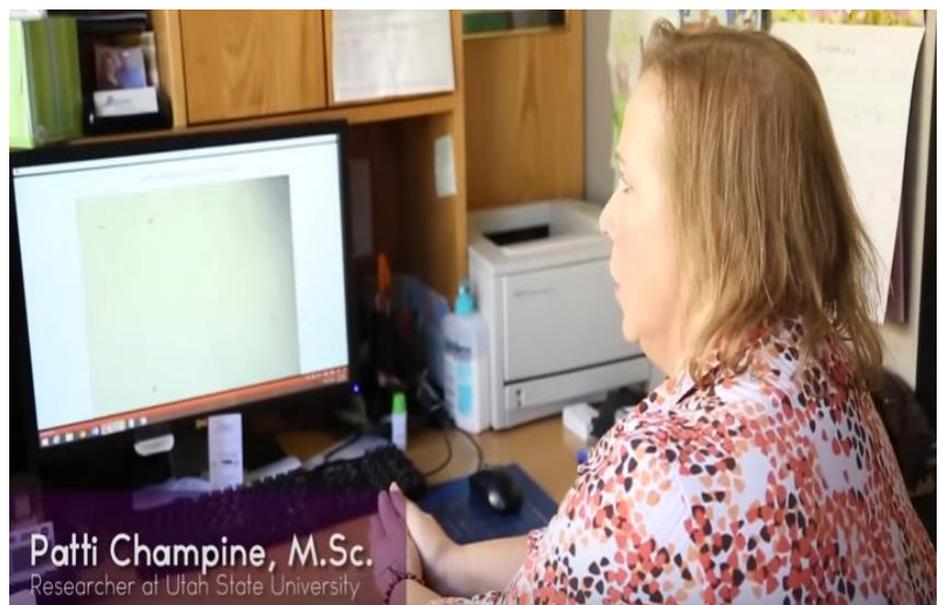

review process has been called into question on multiple occasions. In an article published in the Wall Street Journal (Campbell, 2014), problems with the peer review process were highlighted, including:

- Approved peer review papers being retracted due to an author exploiting the process by giving glowing reviews of his own research using phony names.
- There has been an increase in approved peer review papers being retracted due to the authors misrepresenting information which has led to the inability to reproduce study results.
- A 2011 report in the monthly journal Nature Reviews Drug Discovery showed that the results of two-thirds of 67 key studies analyzed by Bayer researchers from 2008-2010 **COULD NOT** be reproduced.
- Researchers are often poorly trained in experimental design and many publications do not report basic elements of experimental design.
- Some scientists withhold or vaguely describe key pieces of their research to retain a competitive edge, resulting in the inability to duplicate results.
- Some journals allow panel members to agree in advance to giving a paper a favorable review to help it get published.

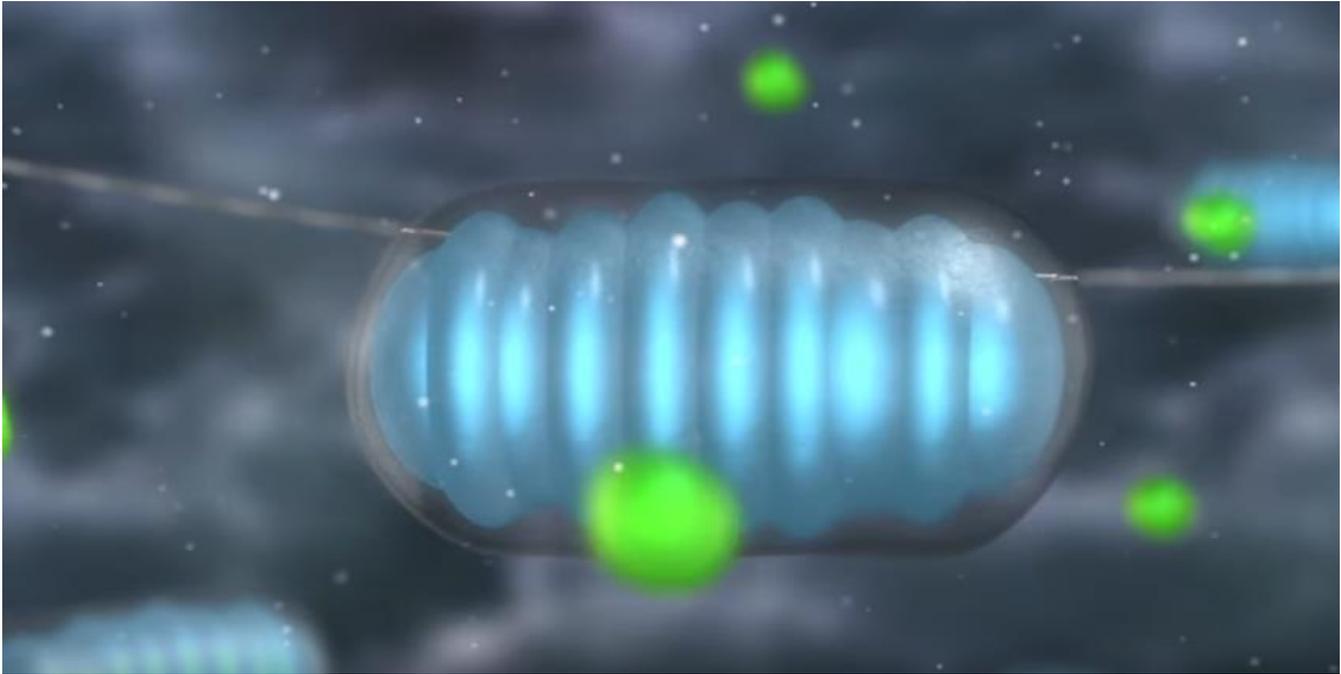

Additional flaws in the peer review process have continued to surface. While there are many peer reviewed scientific claims that are easy to replicate, there are a high number of papers being retracted for not meeting publication criteria. It is not uncommon for the peer review system to reject scientifically valid research while accepting bogus research that cannot be replicated. Journals and researchers often gain notoriety and financial gains despite publishing invalid research that did not truly meet the peer review criteria. While peer review journals can be useful when conducting research, they are not the only way to validate whether or not a treatment protocol is effective.

Response to claims that Delta Institute does not offer evidence or research for any of their claims:

A 90-day study at Utah State University conducted by Patti Champine, M.Sc. provides results on the effect of BX Energy Catalyst on non-small cell carcinoma cell lines. The 150 page report is available upon request. Additional information and results can be obtained by clicking on the picture to the right to watch the video regarding the study.

It is also important to understand that practical methods for measuring mitochondrial function have been developed. Some of these methods include open-respirometry, crenation studies, and mitochondrial function profiles. Results of clinical studies can be found on the website in Module #2 BX Research (In vivo).

Results of an animal survival study and Respiration study results can be found on our website.

Response to claims that the BX Protocol™ treatment costs \$16,995, paid up front, no refunds:

This statement is not entirely true. It is true that once a member is accepted, their membership dues are non-refundable. The private membership dues are based on member value-added benefits. We encourage potential members to read through the membership agreement in its entirety so they understand exactly what they are agreeing to. In the event it is determined that the applicant is ineligible for membership upon making payment, the entire club membership fee is returned to the applicant. It is also important to note that the membership is fully transferrable in the event a member is unable to complete the program. The member may transfer the membership to a friend or family member that meets membership criteria. If the member prefers, they may independently sell the remaining months to a third party who meets eligibility criteria. Every effort is made to ensure the member or their agent receives full benefit from their paid membership.

Response to claims that mitochondrial disease is a real affliction and may cause a wide variety of symptoms and that we cannot claim that it's the root cause of most disease when it is unproven:

Mitochondrial disease **IS** a real affliction. Loss of function in the mitochondria can result in fatigue and other complex symptoms commonly reported in almost every chronic disease (Nicolson, 2013). While research in this area is ongoing, it would be irresponsible to completely

dismiss these claims as ludicrous until proven otherwise. Delta Institute continues to study the root cause of disease in an effort to help members on their health restoration journey. You can learn more here:

Response to claim that Delta Institute’s treatment is an “energized nontoxic biomolecule created from pure crystalline fructose”:

Treatment does not consist of the BX Energy Catalyst™ alone. Members have the option of receiving a Home-Based Treatment Program or a Hybrid Treatment Program. In addition to the BX Energy Catalyst, home based members receive intensive and effective home-based case management support 24/7. This includes virtual tools, equipment, the ability to contact affiliates, case management, and more. The Hybrid Treatment Program provides all the benefits of the Home-Based Program plus the option of on-site treatment by a trained and certified clinical affiliate.

The BX Protocol™ is a combination of cutting-edge alternative health restoration programs and therapies. It is tailored to the individual needs of each member and designed with their health challenges in mind. Some private club members may require on-site treatment at Delta’s state-of-the-art Wellness Retreat while others achieve full results and benefits from the comfort of their home.

The Delta Institute offers programs and technologies such as the BX Energy Catalyst™, specific technologies developed at the Delta Energy Labs™, the Delta Diet, established alternative therapies to enhance health restoration and a unique web-based case management and education system.

Science Based Health Restoration Protocols

BX Energy Catalyst™ is similar to a homeopathic compound designed to take action against stealth pathogens and other causative agents of disease. It has the ability to absorb the vital energy of toxic structures in a manner that yields tremendous antimicrobial action without bio-toxicity, allowing cells to regain healthy function.

Q3 Photonic Oscillator is a technology developed by the Delta Energy Labs™ and is available exclusively at the Delta Member Retreat. It is designed to take advantage of the role of bio-photons in cellular metabolism. The Q3 stimulates photon uptake by cytochrome C, an important mitochondrial protein that plays a vital role in cellular oxidations. This increase in photon uptake results in increased energy production within the cell which aids in your health restoration journey.

Tesla Radio-Cellular Oscillator is technology based on the principle work of Nikola Tesla and Georges Lakhovsky. It is available exclusively at the Delta Member Retreat. This technology is designed to increase the amplitude of oscillations originating from the genetic material of the cell. The amplified oscillations, generating a broad range of radio waves from extremely low frequency (ELF) through gigahertz ranges, produce an increased voltage potential that empowers the cell to repulse the competing oscillations of microorganisms and toxins. This unique technology is designed to increase the effectiveness of the BX Energy Catalyst™.

The Delta Diet was researched and designed to aid in the effectiveness of the BX Energy Catalyst™. Each food included lends to the overall nutrition of the member during the program and is adjusted according to individual's needs. Nutrition is an important part of your healing process. Additionally, the BX Energy Catalyst™ is a highly unstable energy compound which has the potential to be disrupted by a non-conforming diet. Certain foods reduce the overall effectiveness of the energy catalyst. Delta Institute strongly urges members to adhere to the diet for optimal outcome.

Established Alternative Therapies are sometimes used in order to optimize or support the primary therapies used in the BX Protocol™. Alone, they do not have the potential to achieve health restoration but serve to complement and assist in your journey toward health restoration. These include:

- Photo Dynamic Therapy
- Ultrasound Therapy
- Hyperthermia (Local and Whole Body)
- Pulsed Electromagnetic Field Therapy
- Full Spectrum Diet and Nutrition
- Hyperbaric Oxygen Therapy
- Ozone Therapy
- Oxygen Therapies
- Ultra-High Frequency Application
- Immunotherapy
- Homeopathy
- Gerson Therapy

Additional Therapies may also provide support to the main BX Protocol™. Some of those include Zero Point Vacuum Generators, Radio Frequency Oscillators and Super Radiance Stimulators. Each member is carefully observed and recommendation for additional therapies are given based on individual needs.

Web-Based Case Management and Education allows members access to Delta's clinical and administrative staff, ongoing education and more. Their personalized back office gives members the ability to communicate with case management staff seven days a week. They will also have access to custom reporting tools to help track comprehensive blood work and vital signs and symptoms. Delta's extensive reporting tools are unique and allow for better analysis of your health restoration process. This extensive web-based case management system is at the core of Delta's success.

On-Site Treatment and Diagnostics

The Delta Member Retreat is a lush, 110-acre paradise extending from the mountains to the Caribbean Sea. It is the precursor to the Delta Health Restoration Resort and affords members a healing environment second-to-none. The retreat is a unique blend of high-tech healing and paradise wellness. One of the many member benefits of the Retreat is several on-site diagnostics. This includes:

- Hydroperoxide Analysis
- Microscopy Analysis
- Open Respirometry
- Photon Emissions Analysis

Home Based Program

The Delta home-based health restoration program is designed to provide intensive and effective home-based case management support for those requiring long-term health restoration. It provides intensive and effective treatment for those suffering from a chronic and degenerative disease. The Delta Institute's innovative, virtual, home-based program provides members with an out of the box healing experience allowing for full health restoration.

Comprehending how the BX Energy Catalyst™ functions is a complex process that is not yet entirely understood. Studies on the BX Energy Catalyst™ are attempting to understand how the frequency chamber alters the electrostatic energy between the atoms nucleus and the surrounding electronic charge density.

Response to claim that the BX Energy Catalyst is homeopathic or related to ozone therapy, neither which has any relation to the explanation regarding the energized nontoxic biomolecule:

The product does not claim to be a conventional homeopathic, but draws a comparison. The video below explains that the preparations *could be viewed* as homeopathic because of dilution factors, but clarifies it is not. The video goes on to say, "Some people may mistakenly think that this is a homeopathic reaction because the preparation is dilute." There are many similarities to homeopathic preparations but the BX Energy Catalyst. The video below (on page 27) identifies other oxidative therapies that employ the use of singlet oxygen such as peroxide and ozone therapies but explains how the BX protocol™ is different from these therapies. We highly encourage anyone who is interested in the BX Energy Catalyst and how it works to speak with one of our doctors to better understand what it is and how it works.

Response to claim that Royal Rife was a discredited scientist who coined the term Bacillus-X and that he was nothing more than a conspiracy-theorist:

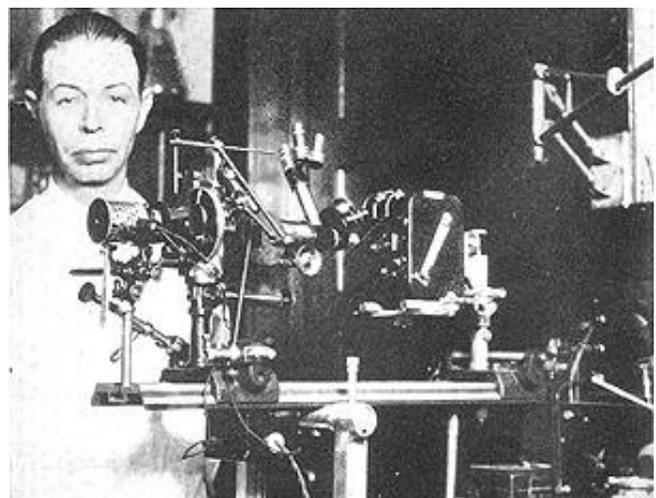

Little evidence exists that proves Royal Rife was actually discredited. Dr. Rife had numerous scientists and doctors corroborate his results (Hess,

1996). Suppression of successful treatment methods has existed for many years. Royal Rife is a good example of a medical professional who had his life's work destroyed in an effort to discredit him. While his research is controversial, there are reports that suggest Dr. Rife's work was suppressed by the American Medical Association (Hess, 1996). It is important to remember that just because work is controversial, it does not mean it is completely invalid. Dr. Smith has devoted much of his life to validating the cause and cure of several diseases, including cancer, through the use of radio frequency, magnetic fields, and catalytic nanotechnology.

Royal Rife created the most powerful microscope ever constructed. This invention allowed him to discover that cancerous cells have pleomorphic properties (Whitney, 2014). His discoveries made it possible to have successful outcomes in treating various bacterial and viral conditions. In 1934, he worked with a prestigious group of nationally famous doctors to complete a study with patients afflicted with cancer. 16 terminally ill patients participated and 14 of them experienced remission in three months, with the remaining two in six months (Whitney, 2014). Sadly, more cancer patients were not able to benefit from his works.

By 1938, the lab supporting his research was burned to the ground. He was brought to trial by the American Medical Association, and doctors who continued to use his frequency instruments lost their license to continue (Whitney, 2014). While some say that he was brought to trial for legitimate malpractice reasons, there is evidence that shows otherwise. Dr. Rife refused to sell his company to Morris Fishbein, editor of the Journal of the American Medical Association (Hess, 1996). Some say this proves nothing and that Rife is nothing more than a conspiracy-theorist. That said, it is illogical to believe that Morris Fishbein would be interested in Royal Rife's work if he had been discredited. While it is possible the lab housing Royal Rife's work

Photo courtesy of quantumbalancing.com

THE WORLD'S MOST POWERFUL MICROSCOPE
Dr. R. R. Rife, of San Diego, standing beside the microscope he has just invented, which is said to be the most powerful in the world, making visible to the eyes of man bacteria never seen before

burning to the ground is coincidental, it is equally possible the fire was intentionally set by those who wanted to suppress Royal Rife's work when he refused to hand it over to the American Medical Association.

It is also vital to know that Delta Institute identifies the work of multiple credible pioneers in the creation of the BX Protocol™. This includes Nobel Prize winner Otto Heinrich Warburg, Dr. William Frederick Koch, scientist Georges Lakhovsky, Dr. Virginia Livingston-Wheeler, and of course Dr. Royal Raymond Rife. We encourage you to conduct independent research about the contributions they each made to the field of cancer research.

You can find out more about their work by watching the video below:

Response to claim that Dr. Smith is a book salesman, not a scientist:

Exhibit D is a picture of Dr. Smith that has been circulated on various sites stating that he is a failed book salesman. This claim is false. Dr. Smith purchased these books as gifts. This book is one of Dr. Smith's favorite books and he highly recommends it to. After purchasing these books, Dr. Smith gave them out to personal friends. This particular claim almost falls into the category of claims that are not worthy of addressing. However, because this stolen picture of Dr. Smith giving a gift to friends has been tainted we elected to include it in this report. Adding the mugshot and implying that he is a conman who has had multiple failed careers had to be addressed. When individuals make a generous act into something devious, one must wonder why they are going to so much trouble to discredit the person.

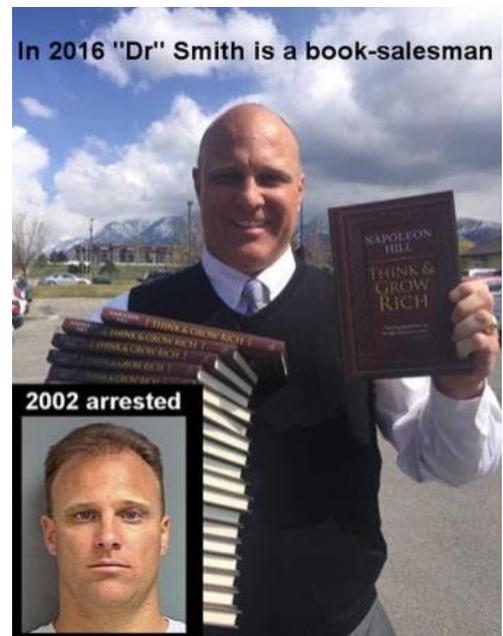

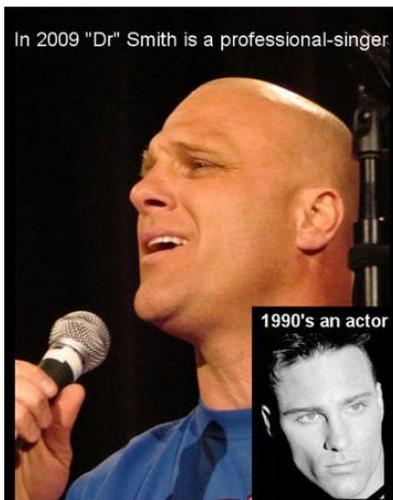

Exhibit D

Response to claims that Dr. Smith became a scientist after his singing career failed:

Exhibit E

Claims have been made that Dr. Smith is also a professional singer in addition to a book salesman promoting an elaborate internet scam. Dr. Smith does not hide the fact that he loves music. In his early twenties, he pursued music for enjoyment but never thought of it as a career. The picture of Dr. Smith singing a couple of years ago, (Exhibit E) was from a community talent show produced by his wife. You may visit the website <http://www.doorstepentertainment.com/> to read more about the music Dr. Smith wrote and performed. His music benefited charities such as missing children organizations. He also performed 9/11 tributes. Most importantly, Dr. Smith dedicated and wrote music to his young daughter who was killed in a car accident. Dr. Smith has not made any money singing. It was never his intention or desire to do so.

Understanding Cyber Terrorist Strategies

By expressing interest in Delta Institute and the BX Protocol™, you could receive contact from individuals looking to instill fear or create doubt to discredit our organization. It is important for you to understand some of the methods that have been used to deter potential members from our program. Ultimately, we want you to do your research and feel good about purchasing membership with us. It is important for you to understand the strategies that may be used to create fear and doubt.

In 2016, some of our email systems were hijacked. The group responsible is a highly sophisticated cyber-criminal organization with significant cyber-attack capabilities. Members, affiliates, and associates should be apprised of a strategy to generate protective orders against Delta Institute and the BX Protocol™ by manipulating communications. Here is how the strategy works:

1. Delta Institute's email system was hijacked to obtain email contacts from current members.
2. The hackers send the member emails. In this case, the emails appeared that Delta Institute was communicating with the person, when in fact, we were not.
3. Many of the emails sent were threatening, demeaning, or violent in nature. The contact would start by slowly engaging with the member, and then built up to a level of threats, bodily harm, etc.
4. After making it appear that Delta Institute was threatening a member, the attackers (or cyber terrorists) establish contact with the person and attempt to assist them in filing a legal action or protective order against our organization or against key personnel within our organization.

There is no evidence that this type of contact has continued since we have increased our security. However, there are also no guarantees that these individuals will not attempt to impersonate Delta Institute employees in the future. We ask that you remain alert and notify us

of any suspicious activity or contact from Delta Institute that seems unusual. Early detection allows us to stop cyber criminals in their tracks.

We now also have proof that members of this cyber terrorist group established a variety of email accounts for the purpose of blog and forum communications. With the use of VPN networks, they are able to avoid detection. However, in recent attacks they have made serious errors, which has enabled us to identify at least one member of their USA network. This information is being added to our file with the FBI in the United States.

When expressing interest in the BX Protocol™ it is possible you may receive an email from "John Q. Public". The emails come from a fake email address using this fake name. We highly recommend that you do not open these emails. If you choose to, it is imperative that you do not click on any of the embedded links. We have reason to believe that these links may include malware, viruses, or other items that may infect your computer system. The example below is content from an actual email sent to one of our members from a testimonial video. Similar emails have been sent to members, their friends, family, and others on their email contact list.

From: "John Q. Public" j0hnqpub1ic@shiftmail.com
Subject: FAO: XXXXXXXXXXX XXXXXXXX. If you have never heard of "BX Protocol" ignore this email.
Date: June 7, 2016 at 12:49:50 PM EDT
FAO: XXXXXXXXXXX XXXXXXXX. If you have never heard of "BX Protocol" ignore this email.
Re: Your testimonial videos for "BX-Protocol" which appear on the internet [YouTube].

Hello Mr. XXXXXXXXX,

This email is to inform you that "BX-Protocol" is a "snake-oil" type scam: a fake "cure-all" medicine. The con-men behind BX are convicted-criminals pretending to be doctors. You can see the full story, including their police mug-shots and their true names, here... [http:// rationalwiki. org/wiki/BX_ Protocol](http://rationalwiki.org/wiki/BX_Protocol) and here ... [https:// archive.is/EzPPI#selection-3959.0-3979.41](https://archive.is/EzPPI#selection-3959.0-3979.41), [http:// mugshots.com/US-Counties/ Utah/Salt-Lake-County-UT/Todd-David-Mauer.628697.1.html](http://mugshots.com/US-Counties/Utah/Salt-Lake-County-UT/Todd-David-Mauer.628697.1.html)

You promote "BX Protocol" in several YouTube videos ...
[https://youtu.be/ u31ekSO1204](https://youtu.be/u31ekSO1204)
[https://youtu.be/ IDU1MRoNW-0](https://youtu.be/IDU1MRoNW-0)
[https://youtu.be /IFZXR2fsJaI](https://youtu.be/IFZXR2fsJaI)
[https://youtu.be/ KsmJKET2InQ](https://youtu.be/KsmJKET2InQ)
[https://youtu.be/ 26f9oJo6XYU?t=5m33s](https://youtu.be/26f9oJo6XYU?t=5m33s)

If you change your mind about your testimonials being used to promote this fake-medicine on the internet, YouTube will remove the videos if you ask them, see here ... [https://support.google.com/ youtube/contact / privacy/](https://support.google.com/youtube/contact/privacy/)

YouTube will remove the videos even if the professional-criminals had you sign a release-form when the videos were made. YouTube don't care about such contracts: they will still remove the videos from YouTube if you ask them, as you are giving-out private (medical) information, and are "uniquely identifiable" in the video, (that I, a complete stranger, have managed to send you an email proves you can be identified from the information in the BXPROTOCOL YouTube videos).

That your lung-function improved is not proof the BX potion is an effective treatment. "BX Protocol" is a fraud: if the label on the bottles of BX is correct, then it only contains distilled water . You should not replace actual medicine prescribed by real licensed doctors with BX, and you should not recommend BX to others, as it's a snake-oil type scam.

Yours pseudonymously

John Q. Public

Contact information for members, affiliates, and prospective members was illegally obtained when an online system was unlawfully hacked. In recent months, activity from “John Q. Public” seems to have stopped. Members, new members, and interested parties have not reported continued communication. This is likely due to the fact that Delta Institute has increased security measures, but we want you to be aware that this does not guarantee you will not be contacted. More information and examples of strategies and methods used can be found online on our forum. For more information about the BX Protocol Forum can be found in this report on page 7. You may also visit the BX Protocol Forum by clicking on the following link: <http://www.bxprotocolforum.com/>

Protecting Yourself

Whether you operate a Fortune 500 company or a small organization, if you do business online, you are at risk of having your systems targeted by hackers. It is not uncommon to hear about hackers stealing username and password combinations or hacking the proprietary systems of well-known companies. These companies often invest large amounts of money in their security systems each year. Despite their best efforts, hackers are often one step ahead of companies you trust your personal information with (Amadou, 2014). This does not mean that you must abandon all online activities. Taking a proactive approach to your online security can reduce your risk of data theft. The precautions listed in this report are important for all internet users, not just BX Protocol™ members and affiliates.

Precautions you can take include to reduce your risk of data theft include:

- Protect your network! Turn on the encryption in your wireless router. Encryption scrambles the data being transmitted so only the intended user can read it. Change the network default name and password. The longer the password with a variety of characters and numbers, the better. Turn off your wireless router when it will not be in use for an extended period of time.
- Use anti-virus and anti-spyware software on your computer. Anti-spyware programs often include anti-keylogging, keystroke encryption, webcam, and sound protection, and much more. Anti-virus programs are often not enough to secure your system.
- Avoid using public Wi-Fi networks unless you use a virtual private network (VPN). While our website is encrypted, hackers can easily access your connection in a matter of seconds when connected to an unprotected, public network. VPN's will encrypt all transmissions between your device and the internet.
- Turn Bluetooth off when not in use. Hackers can discover other devices you regularly connect to. They can easily spoof the device to gain access. It is also recommended you use Bluetooth in “hidden” mode instead of “discoverable” mode to make it more difficult for hackers to find your Bluetooth connection.
- Protect your password. Do not use the same password for multiple accounts. Avoid having your browser save passwords for you, and don't use passwords that can easily be guessed.
- Do not download unknown applications or click on links from individuals you do not know.

- If you become a member, follow the security recommendations given to you to protect your Back Office account (activate 2-step verification, utilize security keys, use encrypted keyboards, etc.).
- Do not give out your password to the Back Office. If you receive a call from someone stating they are a Delta Institute representative, please be aware that we will **NEVER** ask you for your password. Notify us immediately if you are asked for this information.

Trust your instincts. If something feels off, ask for clarification. Keep in mind, we are constantly making improvements to our system. We are monitoring Back Office activity to prevent future security breaches. We have seen much of these activities reduced or stopped entirely in recent months since security has been increased. While we do not anticipate you will experience these issues, we want you to stay alert and report suspicious activities.

Conclusion

As mentioned throughout this report, many of the claims are not worth listing due to their nature. The following would be considered “volume flushing”. They are meant to create a perceived effect that carries a derogatory impact on the BX Protocol™ through high volume disinformation tactics. Examples would include:

- Dr. Smith needing to go on a diet.
- The BX Protocol™ website having spelling errors or edit changes.
- Listing personal information (home addresses of Delta Institute employees, information on spouses and children, etc.).
- Website traffic registration logs, traffic tickets, company registration logs, logo design, employment ads, etc.

The general effect of these attacks has had a positive outcome for our organization. Most people who enroll in our program make informed decisions based on facts, not biased opinions from a specified group spamming various outlets. In fact, we have seen an increase in enrollments as a direct result of their claims. Many conclude that if Leiden is suppressing at this level, then the BX Protocol™ must be effective. If our protocol did not work, it would not be a threat.

Our goal is not to convince people that our protocol is the best treatment plan for them. We recognize that our program is not a good fit for all people. This is why we have membership enrollment criteria that must be met in order for an individual to qualify for our program. Our goal is to educate people on the root cause of disease while providing them options to restore their health. Ultimately, we respect each individual’s right to choose the treatment plan that they feel is best for them. We recommend they research their options using unbiased sources to help them draw their own conclusions. We encourage interested parties to engage in open discussions with us when they have questions or concerns. When a member chooses to incorporate our protocol as part of their treatment plan, we are genuinely honored to be a part of their health restoration team.
